

Claire Gariepy
BSc. Kinesiology, MSc. Ergonomics
Ergonomics Consultant

Claire completed her **Masters** in Ergonomics at Loughborough University in 2007. Upon graduation, the EWI team welcomed her at their Edmonton office. Claire's professionalism, friendliness and easy-going nature allowed her to fit in perfectly with the rest of the gang. From her first day, Claire has been kept busy with assisting her coworkers in numerous projects including office ergonomic assessments, ergonomic audits, and

conducting various types of research on products and standards.

While studying for a career as an Ergonomist, Claire worked closely with the City of Edmonton, specifically Edmonton's Emergency Medical Services. She performed an ergonomic analysis of the equipment EMS personnel use on-call. Following this work, she led a design team in developing new emergency medical kits based on her recommendations. She also evaluated the safety and design of Edmonton EMS's ambulance fleet and made recommendations that were utilized to help enhance the health and well-being of EMS personnel. Claire was a student member of the Ergonomics Society while in the United Kingdom and is currently applying for membership with the Association of Canadian Ergonomists. Like her fellow co-workers before her, she is eagerly working towards her Canadian Professional Ergonomist certification.

After work Claire keeps a healthy and active lifestyle by going to the gym, playing hockey, or taking her dogs for a walk in the off-leash park. She also likes to do home improvement projects and has a knack for baking chocolate chip cookies. However she admits that traveling is number one on her list of all time favorite things to do!
